PRECISION WEED CONTROL FOR ROW CROPS

WEED-IT has been the best solution for green-on-brown since 1999, and now also for green-on-green with our new Spot-in-Crop mode.

One system for your complete weed management. Anytime. Anywhere! With the new Spot-in-Crop spray mode, you're ready to detect and eliminate weeds in several row crops such as cotton, soybean and corn.

SPOT ON CROP PROTECTION

The spray mode offers unparalleled efficiency with its ultra-short 10 cm (4 inches) spray margin, maximizing savings and minimizing environmental impact. Operating 24/7 without additional light sources, it maintains pinpoint accuracy at speeds up to 25 km/h, thanks to 14,000 reads per second.

This plug-and-play, self-calibrating system is resilient against external factors like dust and moving crops, while featuring built-in turn compensation for consistent coverage. It's a cost-effective solution that's ready to use in any row crop, straight out of the box.
